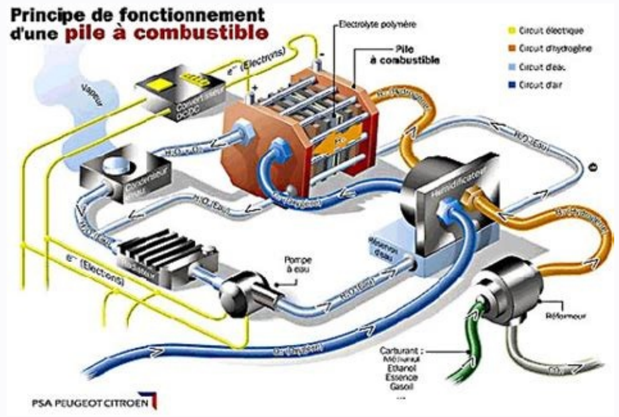
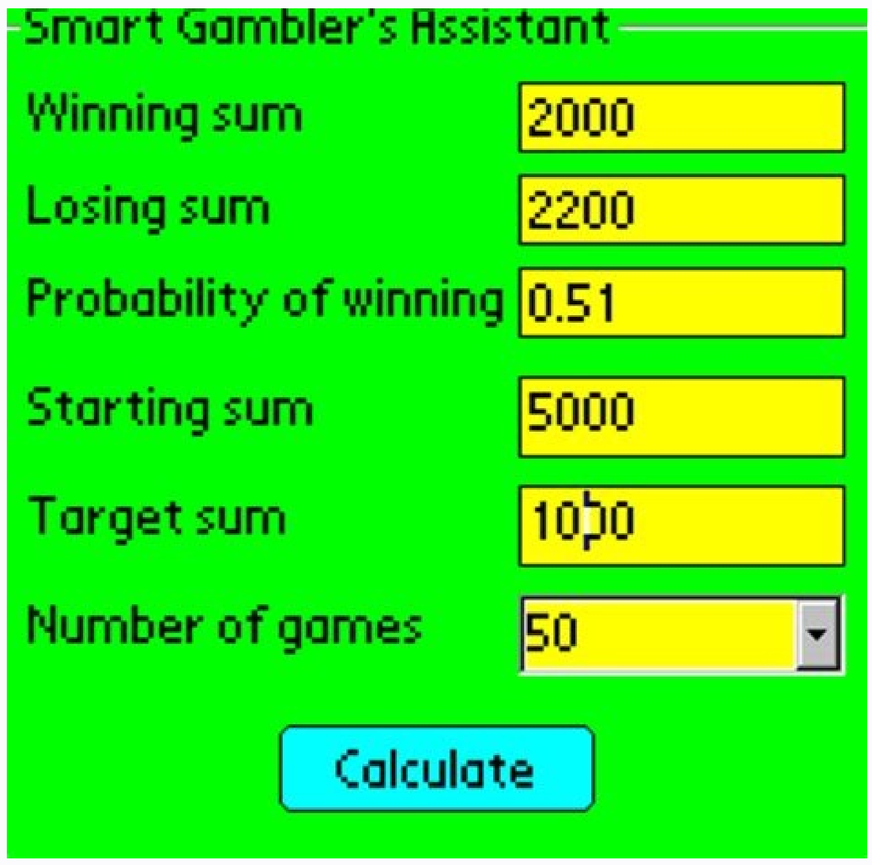
Linux live usb guide pdf free pdf





Uninstalling UNetbootin simply removes the UNetbootin entry from your boot menu; if you installed an operating system to a partition using UNetbootin, removing UNetbootin will not remove the OS. Where can I report bugs, submit patches, etc? UNetbootin isn't able to download the distribution, what should I do? » See Building a UNetbootin Plugin. » See How UNetbootin Works. Launch Disk Utility (search for it with Spotlight, or find it in the Applications > Utilities folder), then click on your USB drive. You may also be asked to grant Terminal permission to access a removable volume, which you should grant. If you're satisfied you can erase the drive without losing data, click on “Erase” and then choose “MS-DOS (FAT)” as the format and give it a name. Source code is on Github, though you may prefer a tarball of the latest release. See the Translations Page for the status of each. If you used the "Hard Disk" install mode: After rebooting, select the UNetbootin entry from the Windows Boot Menu. Press and hold the “Option” button then press and release the power button to start your Mac. UNetbootin doesn't use distribution-specific rules for making your live USB drive, so most Linux ISO files should load correctly using this option. If it still isn't showing up, use the targetdrive command line option. Use balenaEtcher Instead While the Terminal provides a method of doing this that doesn’t rely on additional software, text-based commands aren’t for everyone. If you see a “The disk you inserted was not readable by this computer” error, click “Ignore” and carry on. To manually remove a Linux installation, you will have to restore the Windows bootloader using "fixmbr" from a recovery CD, and use Parted Magic to delete the Linux partition and expand the Windows partition. No; though some anti-virus products may raise "Trojan.generic" warnings due to the auto-uninstall feature, these are false positives. How does UNetbootin work, and what does it do? However, not all distributions support booting from USB, and some others require extra boot options or other modifications before they can boot from USB drives, so these ISO files will not work as-is. If you’d rather use an app to do this instead, try balenaEtcher. If you're absolutely paranoid, you can check the source code and compile it yourself. Click on your USB drive, then click on the upward-pointing arrow to start Linux. The size of the disk (for example, 8GB) may give it away too. How do I use UNetbootin from the command line? Type it, then hit Enter to begin the copy. If your USB drive doesn't show up, reformat it as FAT32. On PCs, this usually involves pressing a button such as Esc or F12 immediately after you turn on your computer, while on Macs, you should hold the Option key before OSX boots. Hate Terminal? For ease, we’d recommend using the same location for both. » See UNetbootin Translations Removal Instructions (Applicable only to Hard Disk installs) If using Windows, UNetbootin should prompt you to remove it the next time you boot into Windows. To do this, use the following command replacing diskX with the identifier (for example, disk3 in the screenshot above). Have a Windows PC you want to boot Linux on as well? » See USB Drive and Hard Disk Install Modes. For information on using the Launchpad Translations system, see the translations help page. Can I help translate? Removal is only required if you used the "Hard Drive" installation mode; to remove the bootloader from a USB drive, back up its contents and reformat it. If using Linux, re-run the UNetbootin executable (with root priveledges), and press OK when prompted to uninstall. UNetbootin is licensed under the GNU General Public License (GPL) Version 2 or above. Also, ISO files for non-Linux operating systems have a different boot mechanism, so don't expect them to work either. Booting on Apple Silicon Unfortunately, as of this writing in July 2021, this technique won’t work on new Apple Silicon Macs with the M1 system-on-chip or later. Translators are listed on the translations page. This open-source app handles the whole process for you, from converting your image to safely copying it to an external volume. Following on from the example above, you could type ~/Downloads/ubuntu. Pick a lightweight Linux distribution for best results and claw back some of the performance lost to hefty macOS updates. My USB stick/hard drive isn't detected, what should I do? You will be prompted for your administrator password. Wait for your Mac to write the contents of the DMG to your drive. Does UNetbootin have any spyware, viruses, trojans, or other malware? You can do this with the following command: sudo dd if=/path/to/image.dmg of=/dev/diskX bs=1m You’ll need to replace /path/to/image.dmg with the path to the DMG file created above, and /dev/diskX with the disk identifier used above (for example, disk3). » See UNetbootin Command Line Options. Where's the source code, and how can I compile or modify it? » See Github Issues to file a bug report. First, make sure you are using the latest version available on this website. Alternatively, you can remove it via Add/Remove Programs in the Control Panel. Supported Distributions UNetbootin has built-in support for automatically downloading and loading the following distributions, though installing other distributions is also supported: Linux Mint Zenwalk Slax Elive CentOS FreeBSD NetBSD 3CX UNetbootin can also be used to load various system utilities, including: Parted Magic SystemRescueCD Super Grub Disk Dr.Web Antivirus F-Secure Rescue CD Kaspersky Rescue Disk Backtrack Ophcrack NTPasswd Gujin Smart Boot Manager FreeDOS Download and run UNetbootin, then select the "disk image" option and supply it with an ISO (CD image). Write to USB With your IMG file ready to go, it’s time to write to USB. Features UNetbootin can create a bootable Live USB drive It loads distributions either by downloading a ISO (CD image) files for you, or by using an ISO file you've already downloaded. Reformat the USB drive as FAT32, then use UNetbootin again to put your distribution on the USB stick. If you decide to install Linux, consider a dual-boot arrangement for your Mac. If you'd like to help translate the UNetbootin program itself, please use Launchpad Translations. From the makers of UNetbootin: HabitLab, a tool to help you waste less time online (for Chrome) Features Using Supported Distributions FAQs License Wiki Download(Windows) Download(Linux) Download(macOS) Donate via Paypal Donate via Bitcoin Donate via Venmo UNetbootin allows you to create bootable Live USB drives for Ubuntu and other Linux distributions without burning a CD. » Maybe, see Installing Other Distributions Using UNetbootin. Open Terminal and enter the following command: hdiutil convert /path/to/downloaded.iso -format UDRW -o /path/to/image Replace /path/to/downloaded.iso with the location of your downloaded Linux ISO, for example if ubuntu.iso is in your Downloads folder, you can type ~/Downloads/ubuntu.iso. » See Github Pull Requests to submit a patch. Head back to Terminal and type the following to get a list of drives: diskutil list You’re looking for the identifier for the USB drive you just formatted. If you gave it a name like “LINUX” then you should be able to spot it under the “NAME” column. UNetbootin was created and written by Geza Kovacs (Github: gkovacs, Launchpad: gezakovacs, contact info). » See Compiling UNetbootin. Different Linux distributions have different space requirements, but around 4GB should be enough for most distributions. Now that you know your identifier, you need to unmount that particular drive so that you can write your DMG file to it. » See List of Custom UNetbootin Versions and Plugins. RELATED: How to Check if Your Mac Is Using an Intel or Apple Silicon Processor Creating Bootable Linux USB Drives in macOS Format Your Drive For best results, it’s a good idea to format your USB drive to FAT before starting. Download the ISO straight from the website, then provide it to UNetbootin via the diskimage option. You can figure out which type of Mac you have using the Apple > About This Mac menu. FAQs Distribution X isn't on the list of supported distributions, will it work? You should see your boot drive, likely labeled “Macintosh HD” and a separate USB drive titled something like “EFI Boot” with a different icon. diskutil unmountDisk /dev/diskX Finally, it’s time to write your DMG file to your USB drive. Boot Linux on Your Intel Mac Power down your Intel Mac, then insert your USB drive if you haven’t already done so. Alternatively, you can force the language to use via the lang=es command-line option, where you substitute es with the the 2-letter ISO 639-1 code for your language. Your Mac will now boot from USB. This could take a while depending on the size of the DMG and the speed of your Mac or USB drive. Similarly, you’ll need to provide a destination in which the DMG will be placed (no need to add the “.dmg” extension). A number of translations are included in the latest UNetbootin release. Click Erase and wait for the process to complete. Corellium has already managed to port Linux to run natively on an M1 chip, but the process is much more complicated than simply writing a disk image file to a USB stick. Convert Your ISO With your Linux ISO downloaded, it’s time to convert it to the IMG format so that it can be written as a mountable disk image. » See Building a Custom UNetbootin Version. What translations are available, and how can I use them? Just make sure you obtain UNetbootin from this site, not some shady third-party source. Using UNetbootin Select an ISO file or a distribution to download, select a target drive (USB Drive or Hard Disk), then reboot once done. Donate via Paypal Donate via Bitcoin Donate via Venmo Stokkete/Shutterstock.com Installing Linux on your old Mac is an easy way to give it a new lease of life. » See Using a UNetbootin Plugin. If you'd like to help translate this website, join the project on Transifex, then edit translations either on this website or on Transifex. See our instructions on how to create a bootable Linux drive in Windows. You can either let UNetbootin download one of the many distributions supported out-of-the-box for you, or supply your own Linux .iso file. If you are new to Launchpad, you will first have to join the corresponding Ubuntu Translators group for the language you intend to translate. If you used the "USB Drive" install mode: After rebooting, boot from the USB drive. If a translation corresponding to your system's native language has already been included into UNetbootin, it should automatically load the corresponding translation. Keep your

finger held down on the “Option” button until you see a list of devices appear on-screen. Linux kernel version 5.13 includes support for the new ARM-based chips, so hopefully support for mainstream distros like Ubuntu isn’t too far off. Before you start, make sure you’re using an Intel-based Mac. My USB stick isn't booting, what should I do? Site materials, documentation, screenshots, and logos are licensed as Creative Commons Attribution-Share-Alike 3.0. Other open-source projects from the creators of UNetbootin HabitLab A Chrome extension to help you waste less time online (on sites like Facebook, Youtube, etc) by experimenting with different interventions (news feed blockers, comment hiders, and more) to find the ones that work best for you. Reformat the USB drive as FAT32, then use UNetbootin again.
